Before putting your cat under anesthesia, we will perform a full physical examination. However, many conditions, including disorders of the liver and kidneys, are not detected unless blood screening is performed. Pre-surgical blood screening will check the status of your pet's liver and kidney functions as well as their glucose level.

**I authorize the pre-surgical blood screening for an additional \$41.25.**

Bleeding disorders are diseases in which blood doesn't clot normally. These disorders can be relatively minor problems OR rapidly life threatening. Before surgery we can perform two simple tests to detect many of these disorders.

**I authorize testing for bleeding disorders for an additional \$47.50.**

Feline Leukemia (FeLV) and Feline Immunodeficiency Virus (FIV) are two highly contagious and potentially fatal diseases in cats. Cats most at risk for these diseases are cats that go outdoors, fight and come from multi-cat households. These diseases can also be passed from mother cat to kitten during pregnancy. We recommend testing your cat for these diseases prior to vaccinating since the vaccines can alter the results of the FeLV/FIV testing. It is also highly recommended to test any new cats you are bringing into your household.

**I authorize FeLV/FIV testing for my cat for an additional \$46.50.**

Occasionally during dental cleanings, we will find teeth that, due to decay or damage, need to be removed for your pet's continued health. Authorization is always required. The total price for the extraction(s) will vary depending on which teeth, the number of teeth and severity of the decay. The cost is in addition to the cost of the dental cleaning. Sometimes dental x-rays are needed to determine the health of teeth and if extractions are necessary, these are an additional charge.
